

# OPENXC SITE

## Current Structure

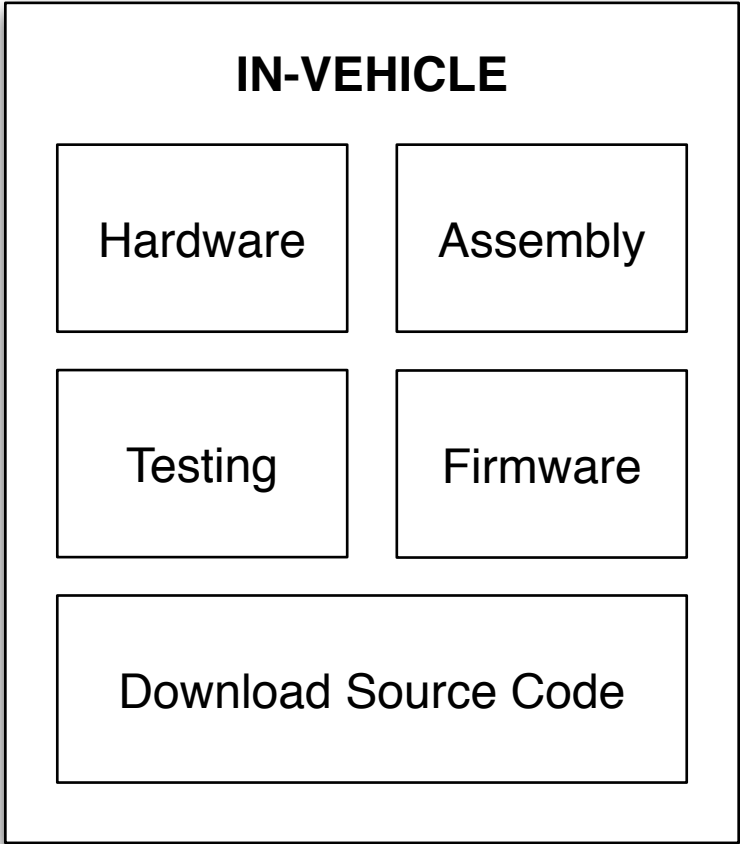

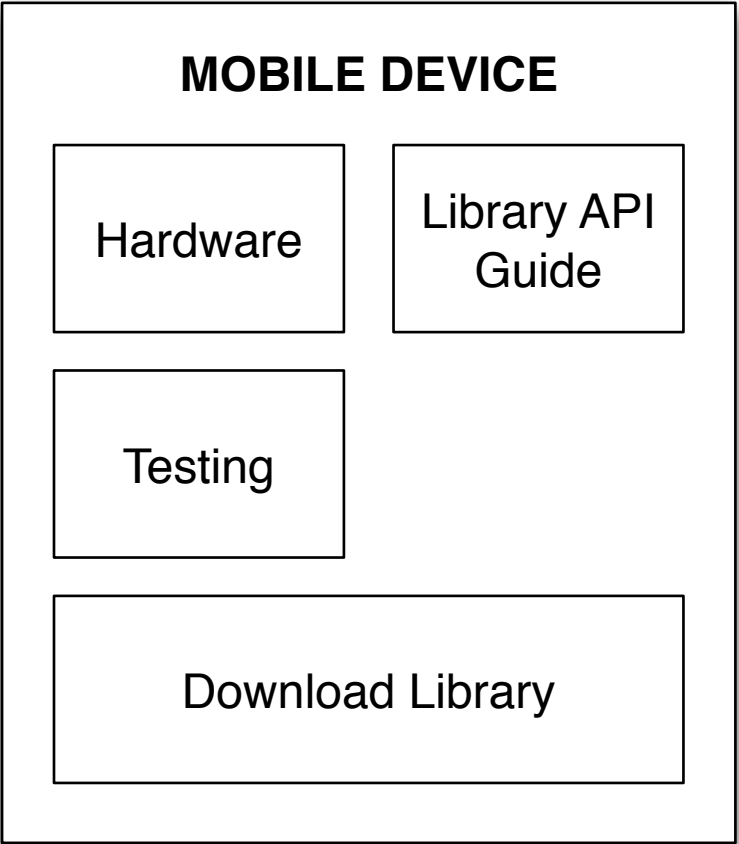

The current site structure is simple, but packs too much information into too few sections. The general breakdown (basics, device, vehicle interface) is solid, but there's an opportunity to make things much clearer.

# OPENXC SITE

## Proposed Structure

The new architecture breaks sections out into a more manageable structure, clearly defining pieces of content and making it easier to find the right information.

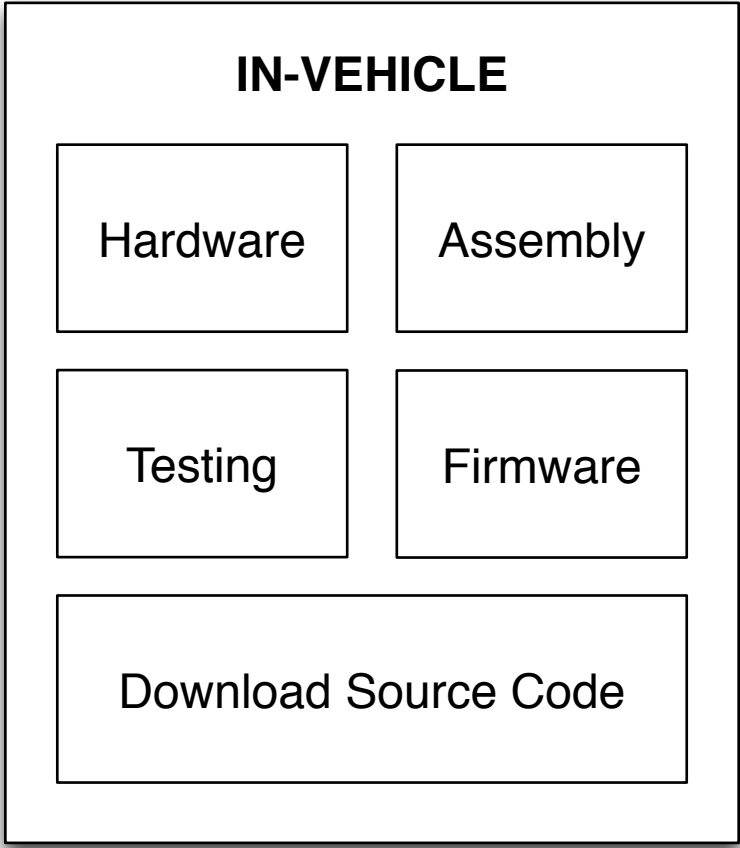

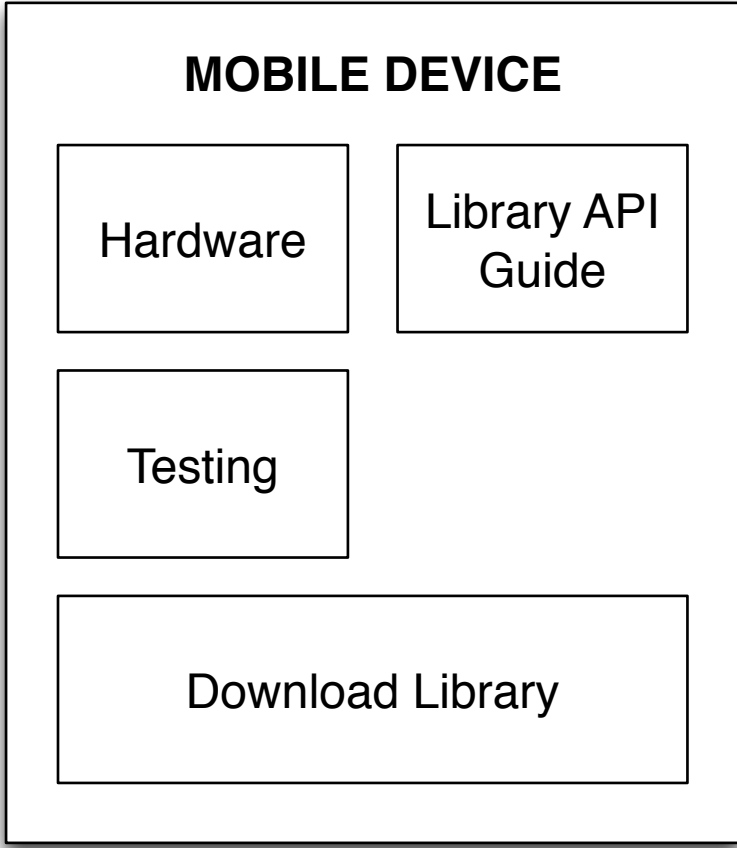

OPENXC SITE

Audience

MEDIA/INTERESTED PEOPLE

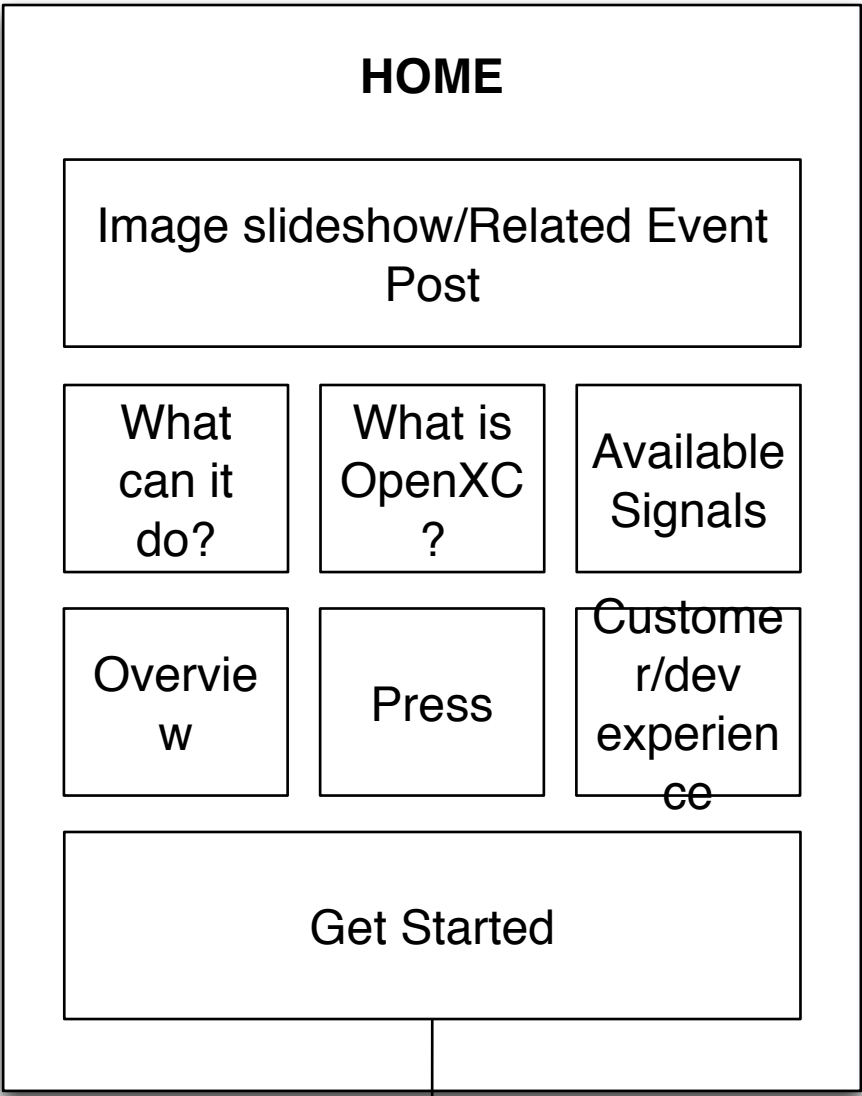

DEVELOPERS

The focus of the developer section should fall in this area.  
The rest of the content should support it.

# OPENXC SITE

## Purpose

The home page becomes much more detailed, providing information to both prospective developers AND media/other interested people.

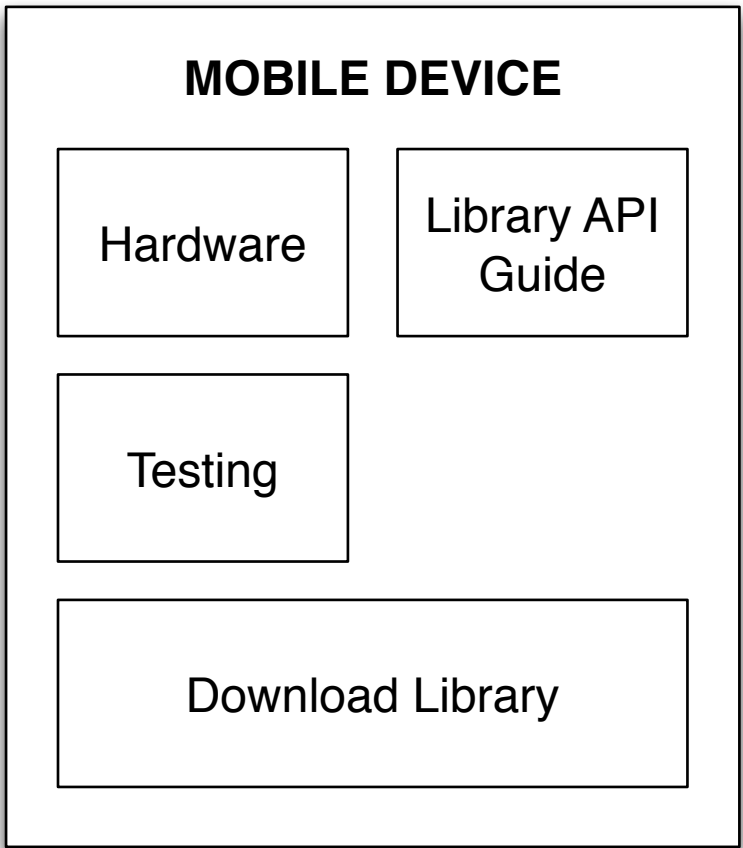

Once all information has been obtained, any interested developers can choose to get started and explore OpenXC more deeply.

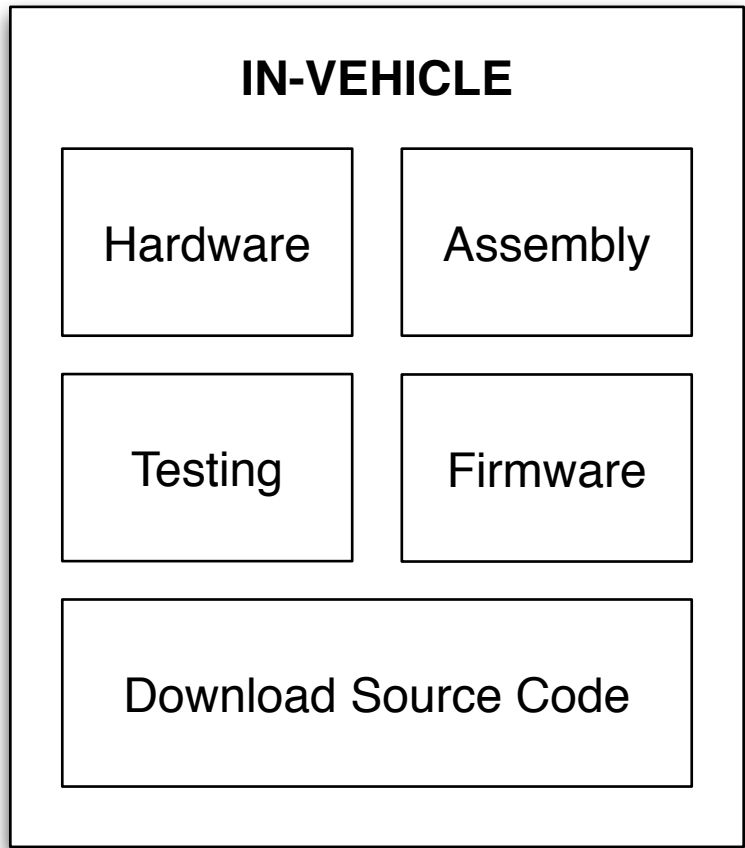

This section introduces OpenXC in more detail while also showcasing some of the cool things that can be done on the platform. A guided option is offered from here (Desktop-> device -> in vehicle) but the visitor can jump to any section at this pt.

This section helps new developers get started quickly with OpenXC. Any step/process contained in this section only requires a computer.

This section contains all information needed to begin developing and testing on a mobile device.

This section provides all information required to get an OpenXC app up and running using real data from a vehicle

These sections contain secondary information that developers might like to consult as they work with OpenXC.
